

StructuredCloud: Security & Business Continuity Managed Cloud Back-up Service

With exponential data growth and increasing regulatory requirements, you want to protect data and applications at reduced costs. You need a solution that helps you quickly back up, restore and maintain access to critical data.

Structured's managed cloud backup service is a fully automated, disk-based platform providing an alternative to conventional backup methods while looking towards the future by utilizing the cloud.

This solution offers a service that enables security-rich, managed protection of critical data. Offering encrypted, secure, offsite storage and rapid online restoration, this service is driving the future IT backup systems.

Addressing Enterprise Back-up Challenges:

Powered by the only FIPS 140-2 Certified
Agentless Cloud Backup Solution

Providing your managed and secure Solution

Your business continuity relies on a secure and reliable data protection and recovery solution, whether at your corporate office or at remote locations. Structured managed cloud back-up service allows you to be flexible with business continuity planning and address data recovery business needs.

Structured managed backup service includes:

- 24/7 monitoring, administration, incident response and restoration
- Monthly and quarterly reports that detail the health and reliability of your backup environment and key performance metrics
- Real-time notifications via Structured NOC

Why StructuredCloud?

Security

Powered by Asigra, FIPS Certified platform. Data is secured using AES 256-bit in-flight and at-rest data encryption.

Flexibility

Flexible SaaS model offers utility-style pay based on usage to provide predictable costs and operational SLAs that are accountable.

Support

Agentless technology supports the broadest variety of platforms including Windows, Linux, UNIX, AS/400, and Apple — plus hot backups for all leading databases and applications. Service includes 24x7x365 enterprise-class support

Compliance

Retain and purge your database to safeguard intellectual property and meet regulatory requirements.

StructuredCloud: Security & Business Continuity Managed Cloud Back-up Service

Addressing Back-up Challenges with Asigra:

Data Protection

Supports a heterogeneous application, hardware, and device environment combined with enterprise class restore and recovery assurance.

Risk Management

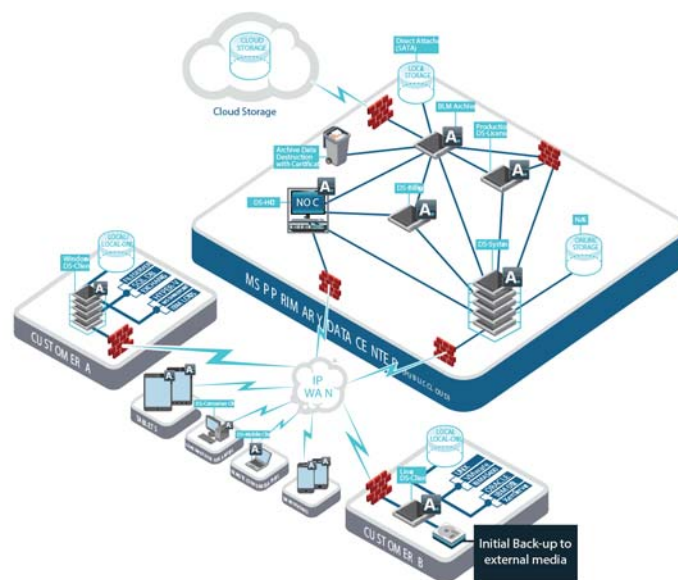

Data is secured using AES 256-bit in-flight and at-rest data encryption. Government approved FIPS 140-2 security certification ensures data is being protected at the highest level.

Total Cost of Ownership

A completely managed back-up platform so you focus on strategic tasks. Priced in a 'pay-as-you-grow' cloud model; so you can minimize your upfront capital investment.

Asigra's Agentless Advantage

The agentless architecture removes the need to install individual agents on each machine that needs to be backed up. This simplifies installation and on-going operations, it also removes downtime disruption associated with installing/maintaining agents. Additionally agentless back-ups reduce security threats associated with software that traditionally needs to be installed.

Asigra provides system-agnostic, agentless backup and recovery support for all leading applications and operating systems:

- VMware
- XenServer
- Hyper-V
- MS SharePoint
- MS Exchange
- MS Outlook
- MS SQL Server
- SAP
- Oracle
- DB2
- PostgreSQL
- Sybase
- Lotus Notes and Domino
- GroupWise
- MySQL
- Windows
- Linux
- NovellNetwork
- Mac OSX
- System i
- Apple iOS
- Android
